

NOTE D'INFORMATIONS

Here are the measures taken vis-à-vis COVID 19 as part of our activity according to decree 2020-545 of May 11, 2020

CLEANING / DESINFECTION

Since Confinement, we trained and have gotten into a habit of disinfecting our vehicles. Via a complete steam treatment of the entire interior of our vehicles compartments as well as the door handles and trunk. This method will be maintained several times a week after May 11th.

Additional health measures recommended by state services requires us to clean the vehicle every day, but daily cleaning was already the case before this health crisis and we don't think it's rigorous enough.

So we made the decision in addition to cleaning and steam treatment, to disinfect the cabin with a treatment with anti-bactericidal, germicidal and viral products into the passenger area, between each client and regularly throughout the day.

The goal is for each passenger in our vehicles to feel we took a real interest in participating in barrier gestures, protecting them by protecting us. We are a limousine service, with a specialty of "Safety driver" that implies a much more marked awareness of the needs of our customer.

RECOMMENDED TECHNICAL GESTURES

The government enquires us not to get out of the vehicles, or to touch the doors, passenger luggage.

This is not our job, this is one of the reasons we are different.

We therefore have plastic gloves on board in order to make these gestures of service in safety conditions for both passengers and drivers.

VEHICLES CAPACITY

- **In S class**, we are limited to carrying 2 passengers per vehicle
- **In V class**, we are limited to carrying 4 passengers
- Anyway, **the law** requires us not to transport passengers next to the driver, we will have to use the front passenger seat for possibly luggage if there is insufficient space in the trunks. It will be necessary to adapt and surely offer a V Class in certain cases, instead of an S class or more simply to offer to take 2 cars.

PARTITIONS AND INSURANCES LIABILITIES

In order to maintain such a capacity to transport people, the government requires us to install partitions.

These partitions are very good to avoid direct contact of postilions between the passenger and the driver (the partitions are not airtight).

We must provisionally lose the standing of a vehicle, but not that of a high-end service,

Despite this accessory, we keep our insurance guarantees in the event of an accident. Namely "without limited values" for people transported as part of our activity.

A display reminding the barrier gestures is available to our passengers.

We have masks available to our passengers, hydro alcoholic gel and we will disinfect the vehicles between each order.

The cost of all the measures will remain at our expense and the Rates we propose you will stay the same until the end of this crisis. Here are the measures we have taken to find a peaceful activity.
